DETAILED ACTION

1. This Office Action is the answer to the Amendment filed on November 6, 2006, which paper has been placed of record in the file.
2. Claims 20-24 are pending in this application.

Allowable Subject Matter/Reasons for Allowance

3. Claims **20 and 24** are allowed over the prior arts cited records.

The closest priors art are:

1) Barr et al (5,761,442) discloses the method of measure portfolio performance comprises the parameter Beta which is a measure of volatility of the stock relative to an underlying benchmark, Alpha which is a measure of the excess return of the stock over the beta-adjusted benchmark.

2) Giansante et al (6,275,814) discloses the method of measure portfolio performance using the parameter Alpha and Beta in which Alpha is a measure of the amount by which the return on an asset exceeds the return of a market benchmark, Beta is a measure of the covariance of an asset's return compared with the market.

Therefore, it is cleared from the description of Barr et al's and Giansante et al's inventions that the prior arts do not considered the possibility of a new coefficients (A plus Alpha) as included in claim 20, and new coefficient Gamma as included in claim 24. Theses new coefficients have a much smaller standard deviation than the conventional algorithm coefficients, thus reducing the standard deviation of the coefficients in order to minimize the distortion that arises from overweight certain periods relative to others.

4. Claims 21-23 are allowed because they are dependent claims of the allowable independent claim 20 above.

Conclusion

5. Claims **20-24** are allowed.
